

Lab2a

Question 1:

- a) Jackson County(?) or Malheur
- b) July and August had the most fires over the total of all years
- c) 66,793 Fires
- d) Largest fire was in Malheur County, 2012/07/08, and was called Long Draw
- e) 10 Fires in lane county larger than 50 acres

Lab2b

- a) The last cell of code shows Malheur County Oregon, with the population density. Overlayed on that are the locations of all fires greater than 25 acres. I was curious to see if the fires were in any way focused around population centers (or the one population center of the county) or if it was truly dispersed. Seems that it was entirely random at an initial glance.
